Contamination with *Listeria monocytogenes*, an organism which can cause serious and sometimes fatal infections in young children, frail or elderly people, and others with weakened immune systems. Although healthy individuals may suffer only short-term symptoms such as high fever, severe headache, stiffness, nausea, abdominal pain and diarrhea, *Listeria* infection can cause miscarriages and stillbirths among pregnant women.

CATEGORIES

-  Ideal burndown
-  Remaining burndown
-  Hours completed

Completed approximately ~99% of planned tasks for sprint

- Team will review and finalize remaining RFQ deliverables prior to submission
- Team targeting final RFQ submission on or before the 7/7 deadline

Sprint Retrospective meeting planned for today, 6/30

- Conducted a third round of usability testing with user feedback group

Feedback summary for third iteration:

What improved about the application since Round 2?

- Header on the page and map look great; flows better
- Search filter and categories has also improved; easy to use
- Sort by severity buttons works much better
- Including an explanation in the tour helped provide immediate understanding of how to use

What do you think we can improve on?

- Wish title of our app 'Total Briecall' was more obvious on main page
- Site introduction/overview text at the initial landing page was helpful, but could also be useful on the recall by state pages too
- Sharing across different social media platforms
- Recalls organized by date, most recent at the top
- Active map rather than the static graphic that users could scroll out from to select a different state rather than having to go through the menu
- Menu at the top, rather than folded under the current navigation (would remove the added step of clicking into the navigation menu to get to another page)
- Search on keywords in the description of the recall cards would be nice

- **RFQ Submission Wrap-up**

- Finalize 'Readme' write up
- Finalize compliance checklist
- Final pass-through on Git wiki documentation/evidence

- **Future Sprint Ideas:**

- Allow users to correct state/map information if our parsing is wrong
- Allow users to add favorites
- Allow search by barcode
- User can specify the type of their diet in their profile to get relevant recall information (e.g. vegan will not get meat recalls)
- Provide a related recalls link for similar products based on eventID
- Swipe left/right to dismiss a card series
- Node graph connecting events and company recalls
- Gmail-style groupings of cards of similar information
- Provide total count of recalls in the header section
